# Computer Programs for the Home Charles D. Sternberg

#### **EQUIPMENT NEEDED**

To use the programs in this book on a TI-99/4A, you will need the following equipment:

- TI-99/4A and a black-and-white monitor or TV
- Printer (optional)

Portions of this book first appeared in *BASIC Computer Programs for the Home* by Charles D. Sternberg, copyright © 1980 by Hayden Book Company, Inc.

# TI BASIC Computer Programs for the Home

### Introduction

#### The Purpose of This Book

Traditionally, home computers, when first purchased, have been used as interesting but expensive game-playing devices. That they have not been more frequently put to a more serious purpose stemmed from the lack of a readily available, comprehensive set of home application programs that were easy to use and understand and that satisfied the practical requirements of the home. The objective of this book is to provide a set of programs that will make your computer start paying for itself the moment it crosses your threshold. The programs provide a good cross section of practical applications that will make your computer beneficial to all family members. The applications have been designed so as not to rely upon the availability of tape or disk-storage devices or upon any other features that may not be easily come by. As you gain familiarity with computer use, moreover, modification of these programs to utilize features of your particular machine should present few difficulties.

#### The Book's Format

The computer applications given here have been formatted in a way that I hope will be of greatest value to you. Each application has been supplied with detailed information/documentation in the following form:

- 1. A narrative description of the application includes a brief explanation of the program's functions, data entry procedures, data formats, output descriptions, and suggested enhancements or comments, when appropriate.
- 2. A complete listing of the program is provided with remarks and data necessary for initialization. All line numbers have been incremented by ten (10) to insure ease of data entry and extension or modification.
- 3. A listing of sample data used for the example run illustrates the form of data entry and the results it produces.
- 4. Examples of outputs from the program using the sample data are shown. Whenever possible, the various optional outputs of the program are all shown.
- 5. All major variable names (symbols) used by the program are explained. In addition, all features of the program that may not be available in the tiniest versions of BASIC are listed and explained.

#### **Entering/Interpreting the Programs**

The programming approach decided upon for this book is meant to facilitate your ease of program interpretation and extension or modification. It does not take advantage of many language facilities that minimize program length or processing speed. Concise, highly efficient routines have been avoided as a rule because they generally result in a lack of interpretive clarity and the modularity necessary to facilitate modification and change. REMark statements have been used liberally to assist you in interpretation of the program's operation.

Initially, the programs should be entered and tested exactly as they are shown. As you gain familiarity with your machine and its language, you may wish to take advantage of its various memory and time-saving features, such as (1) eliminating extraneous spaces in the instructions, (2) variable dimensioning of arrays and FOR loops, and (3) placing multiple statements on a line (when clarity is not affected). Once a program has been entered, it should be thoroughly tested to insure your understanding of the data formats and the machine acceptability of all program instructions.

#### About TI BASIC and the TI-99/4A Home Computer

TI BASIC, which is the residence console BASIC language of the TI-99/4A home computer, is as powerful as any other versions of BASIC language available for other personal/home computers. It can handle most programming needs which may arise. However, due to its screen display size, which is 24 rows deep by 28 columns wide, some programs in this book have been designed for printer's output rather than screen output. Such programs are those that require an 80-column display; they are indicated as such in the programs.

This TI conversion was done by Mr. Rigas Papagolos, President of 99/4 Tri-State Users Group, Lincoln, Rhode Island.

Interest Received Projections
Mortgage Amount Projections
Mortgage Comparisons
Property Comparisons
Financial Records
Income Tax Recording
Stocks

#### **CHECK BOOK BALANCE**

#### Description

This program allows your computer to assist you in that onerous monthly task of balancing your checkbook against your bank statement. It allows you to enter deposits and checks outstanding to insure that all items are included in your balance. All required data is entered at the keyboard in response to program prompting.

#### Functions of the Program

The program first initializes the data for balances, deposits outstanding, and checks outstanding. As these items are entered, their total is accumulated. Following the completion of all required entries, the results are printed, and the final lines of output show the comparison between the bank's figures and your own.

#### Instructions for Use

Run the program and respond to the questions asked. You will need your bank statement and your checkbook stubs.

#### **Data Entry**

All data is entered in response to program prompting.

#### **Output Description**

See example output. The form of the output is similar to that provided for your use on the reverse of most bank statements.

#### Comments

The program will accept up to 20 deposits outstanding and 100 checks outstanding.

#### HOUSEHOLD BUDGET

#### Description

This program will help you prepare your monthly budget. Information is entered using data statements and is retained for later analysis or review.

#### Functions of the Program

The program reads the budget categories and expense items from data items, as well as the month name abbreviations. It stores these items in arrays, determines the first month/year to print based upon your input, and then finds the starting point in the data items supplied. During processing, the items are read, totaled, and then printed. Note that you must define your budget categories for the program as shown in lines 1180–1230 of the program listing.

#### Instructions for Use

Before running the program, it is necessary to initialize the budget codes that you wish to use (or use the ones given here) and to provide the budget data items using DATA statements following the budget code "END" indicator.

#### **Data Entry**

All data is entered using DATA statements.

#### **Data Formats**

There are three types of data formats for this program:

- 1. The budget category codes are entered in the form:
  Code, Category (Fixed, Variable, or Semivariable), Explanation
- 2. The master month entry is given by:
  - \*, Month name abbreviation, Year
- 3. Budget expense items for the month are entered using the form:

  Budget code, Amount, Explanatory comments

Note the END card.

#### **Output Description**

See example provided. Output will be printed for the number of months requested. A maximum of six months is possible, printed horizontally.

#### **Comments**

The number of budget expense codes in the program is currently limited to 20.

#### HOUSEHOLD EXPENSES

#### Description

This program will assist in the preparation of household expense reviews and analyses based upon actual-versus-budgeted expenses. In conjunction with the household budget program given previously, this program will be useful in getting the most for your dollar.

#### Functions of the Program

The program functions in the same way as the household budget program except that only one month is printed during each run of the program. In addition, you will be asked to enter the budget amount through the keyboard for each of the prompted expense categories. Note that the expense categories are defined by you as shown in lines 1140-1210 of the program listing.

#### Instructions for Use

To run this program, it is necessary to initialize the expense categories that you wish to use and to provide the data entries for the expenses incurred during the month. Note the sample data provided.

#### **Data Entry**

Expense data is entered using DATA statements, and budget information is entered through the keyboard.

#### **Data Formats**

There are three types of data formats available:

1. Expense category codes and their explanations are entered in the form:

Expense code, Category (Fixed, Variable, or Semivariable), Explanation

- 2. Monthly entries require a heading record of the form:
  - \*, Month name abbreviation, Year
- 3. Expense item entries are provided in the form:

Expense code, Amount, Explanatory comments

Note the END card.

#### **Output Description**

Two forms of output are available:

- 1. A detailed list of the month's expenses (complete with explanatory comments).
- 2. An analysis of the month's actual-versus-budgeted figures.

#### **Comments**

The number of expense category codes is currently limited to 20.

#### **INSTALLMENT PAYMENT PROJECTION**

#### Description

This program produces projected monthly payment amounts for loans that are based upon monthly compounding of interest.

#### Functions of the Program

The program accepts inputs of amount to be borrowed, the number of payments desired, and interest rate information. It then calculates and prints the projected monthly payment.

#### **Instructions for Use**

Run the program and answer the questions asked by the program.

#### **Data Entry**

All data is entered through the keyboard.

#### **Output Description**

See example provided. A projected monthly payment figure is printed.

```

#### INTEREST RECEIVED PROJECTIONS

#### Description

This program will assist you in analyzing potential investments. It estimates the future returns on an initial investment at a given interest rate.

#### Functions of the Program

The program initializes variables by requesting inputs through the keyboard. It allows various compounding strategies and will print the results after each compounding period, or at the end of each year. Following the input of all items requested, the program prints the initial information and then proceeds to calculate and print the results.

#### Instructions for Use

Run the program and answer the questions asked by the program.

#### **Data Entry**

All data is entered through the keyboard.

#### **Output Description**

See examples provided. A table of amounts and interest received, by period, is produced.

#### MORTGAGE AMOUNT PROJECTIONS

#### Description

This program will project monthly mortgage payments for any amount, interest rate, or mortgage term.

#### Functions of the Program

This program accepts keyboard input for the projected mortgage amount, interest rate, and number of years for the mortgage. It then produces a projected monthly payment that includes both principal and interest. After data is entered, the interest rate is converted for compounding purposes. Following the computations, the initial entries, as well as the projected monthly payment amount, are printed.

#### Instructions for Use

Run the program and answer the questions asked by the program.

#### **Data Entry**

20

All data is entered through the keyboard.

#### **Output Description**

See example output provided.

#### MORTGAGE COMPARISONS

#### Description

This program produces a table that compares various mortgage amounts, terms, and interest rates. The information is ideal for the prospective buyer or seller and allows him to compare various alternatives that may be available.

#### Functions of the Program

You are asked to indicate which of the items to vary first. Based upon your response to this question, the amounts, terms, and interest rates are entered. The example output shows the results of a run where the mortgage amount was varied.

#### Instructions for Use

Run the program and respond to the questions asked, through the keyboard.

#### **Data Entry**

22

All data is entered through the keyboard.

#### **Output Description**

See examples provided. The program produces a table of comparisons. They differ slightly in appearance depending upon the item being varied but all tables include the mortgage term, interest rate, mortgage amount, projected monthly payment, and total interest to be paid.

#### PROPERTY COMPARISONS

#### Description

This program produces a table giving the monthly costs associated with a specific property. Included in the table is a computation of monthly principal-interest and monthly principal-interest-taxes-insurance. Also included is a projected total monthly cost of the property.

#### Functions of the Program

The program requests annual and monthly expense information concerning the property. Following this, the computation of monthly charges is accomplished, and a cost table is printed. At the end of each cost table, the program requests the name of the next property to consider. The program continues to request information on new properties until you provide a null response (press the return only) to the property name question.

#### Instructions for Use

Respond to the questions asked by the program. Be thorough in your entry of all relevant costs.

#### **Data Entry**

All data is entered through the keyboard.

#### **Output Description**

See example provided.

(Note: This program was designed for printer's output; for screen's output, some format modifications are necessary.)

#### **Comments**

The program's results will be only as good as the data provided.

#### **FINANCIAL RECORDS**

## Description

Items such as credit card numbers and the contents of financial papers can cause significant difficulties if not immediately available or lost. This program was designed to assist you in recording important financial information. It allows for recording information concerning credit cards, insurance, securities, and property (mortgage) information.

## Functions of the Program

The program accepts all entries from DATA statements previously provided and prints all entries, or selected categories of entries. A separate processing area exists for the handling of each type of record. In each area headings are printed, formatting is accomplished, and the items are printed.

#### Instructions for Use

Provide data entries for all items prior to running the program. The DATA formats differ slightly for each type of record.

## Data Entry

All data is entered using DATA statements.

#### **Data Formats**

There are four data formats; each is described below.

- 1. Credit card entries:
  - C, Card name, Name issued to, Card number, Expiration date, Credit limit, Address to notify in case of loss
- 2. Insurance entries:
  - I, Type insurance, Name issued to, Policy number, Date issued,
    Amount, Company name and address
- 3. Securities:
  - S, Security type, Company, Quantity, Date purchased, Purchase price, File location of security
- 4. Property (Mortgages):
  - M, Property location, Registered to, Mortgage years, Purchase date, Amount, Mortgage holder

## Output Description

See examples provided. The output can include all records or those of a specified type only.

(Note: This program was designed for printer's output; for screen's output, some format modifications are necessary.)

#### **INCOME TAX RECORDING**

## Description

This program can assist you in recording/computing the various items required for State and Federal income tax reporting. While it cannot produce the completed forms for you (because of changing laws and forms), it can assist with the tedious job of accumulating your results.

## Functions of the Program

The program initializes the various income/deduction categories first. As the program exists in the listing provided, the first eight items are considered to be income categories. Item number 8 is not defined. The remaining items are the expense (deduction) categories. All data items are read to accumulate income items. Following the completion of reading the income items, the data is restored and the process is repeated for the expense categories.

#### Instructions for Use

Prior to running the program, the income and deduction items must be entered using DATA statements.

## **Data Entry**

All data is entered using DATA statements.

#### **Data Formats**

The format for both income and expense items is the same:

I or D, Detailed item type code, Amount, Explanation
See examples provided.

## **Output Description**

See example provided. Output is produced in separate sections for income and deductions. Subtotals and totals are produced for all categories.

(Note: This program was designed for printer's output; for screen's output, some format modifications are necessary.)

## **Suggested Enhancements**

This program could easily be modified to accept input from disk or tape files that were accumulated throughout the year.

#### **Comments**

The results will be no better than the data provided.

#### **STOCKS**

## Description

This program can assist the investor in analyzing and keeping track of current holdings. There are three options available:

- 1. Listing transactions
- 2. Listing current holdings after computing the results of all buy/sell transactions and stock splits
- 3. Producing a profit/loss analysis for specific stocks owned.

## Functions of the Program

The program accepts all entries from DATA statements, interprets the transaction code, and produces the listing desired. The data expected for each type of transaction differs as shown below.

#### Instructions for Use

Transactions are entered in DATA statements prior to running the program. The data should be updated as transactions occur but can be gathered and entered just prior to a run.

#### How to Enter Data

All data is entered using DATA statements.

#### **Data Formats**

See examples. Data formats differ for each transaction type, as follows:

- 1. Buy transactions:
  - B, Company name, Stock symbol, Exchange, Date purchased, Price per share, Quantity of shares, Commission paid
- 2. Sell transactions:
  - S, Company name, Stock symbol, Exchange, Date purchased,
    Price per share, Quantity, Commission paid
- 3. Dollar dividends:
  - D, Stock symbol, Dividend amount per share, Date of dividend, Shares of record for dividend
- 4. Share dividends:

SD, Dividend per share, Date of dividend, Shares of record for dividend

5. Stock splits:

SS, Shares after split, Shares before split, Date of Split, Shares of record for split

## **Output Description**

See examples provided. Three forms of output are available; each has easily readable headings for clarity and ease of interpretation.

(Note: This program was designed for printer's output; for screen's output, some format modifications are necessary.)

#### **AUTO MAINTENANCE**

## Description

Automobiles are increasing in price every day. This program will assist you in insuring that recommended maintenance (service) actions are taken to protect your investment. In addition, it provides an ideal record for showing to prospective buyers.

## Functions of the Program

The program reads the data items that reflect the manufacturer's recommended maintenance schedules and the service accomplished by you. The basic schedule items are extended by the program (based upon mileage) through the current mileage on the vehicle. Maintenance schedules and records are printed, as requested.

#### Instructions for Use

Data entries of all recommended service items in the automobile owner's manual must be entered into the program prior to running. Service performed should be entered as it is accomplished.

## **Data Entry**

All data is entered using DATA statements.

#### **Data Formats**

Three formats are required:

1. The first item is the automobile's purchase date:

Month, Year

2. Basic manufacturer recommended service schedules are then added in the following form:

Service code, Description, Frequency in miles, Frequency in months

3. Service accomplished is entered in the following form:

Service code, Mileage, Month, Year

Note that an END card is required to separate the basic service requirements from the items accomplished.

## **Output Description**

See example provided. Three outputs are available:

- 1. A list of the basic maintenance requirements and their frequency.
- 2. A detailed list of maintenance accomplished.
- 3. A schedule of the next scheduled accomplishment of each of the service requirements.

## **GASOLINE USE COMPUTATION - BASIC VERSION**

## Description

The rising cost of gasoline makes this program more useful each day since it allows you to compute the current average miles per gallon for your automobile(s).

## Functions of the Program

The program requests from you the initial mileage for the period and the date that the recording period started. Following this, the gasoline used during the period is entered along with the mileage at the end of the period. The program then computes miles driven, total gasoline used, and the average miles per gallon for the period.

#### Instructions for Use

Record your mileage and the gasoline used prior to running the program. Supply this information in response to the program's request.

## **Data Entry**

All data is entered in response to the program's request, through the keyboard.

## **Output Description**

See example provided.

## Suggested Enhancements

See the extended version for historical recordkeeping functions.

#### GASOLINE USE COMPUTATION - EXTENDED VERSION

## Description

This program extends the basic version shown previously by adding a historical record of gas mileage and consumption.

## Functions of the Program

See the basic version. This program adds to these functions the capability to print data items from past periods. After each analysis, the format to be supplied for historical use is printed for you.

#### Instructions for Use

Record your mileage and gas consumption prior to running the program. After processing, enter the information as DATA statements in accordance with the instructions given.

## **Data Entry**

Current information is entered in response to program request. Historical information is entered using DATA statements.

#### **Data Formats**

The format of the historical data is as follows:

Starting month-day-year, Ending month-day-year, Ending mileage, Miles driven during period, Gasoline used

## **Output Description**

See example provided.

#### **AUTOMOBILE COMPARISONS**

## Description

This program has been designed to assist the automobile shopping family in the evaluation of the costs of owning the various models being considered. The selection can then be made with a better idea of what the total costs of the model really are.

## Functions of the Program

The program compares the specified number of automobiles based upon several vital costs of automobile ownership. These costs are computed for the time period requested. The costs analyzed include: gasoline, maintenance, depreciation, insurance, and other costs. Each cost computation is separated for ease in adding other cost categories.

#### Instructions for Use

Run the program and enter the cost data in response to the program's requests.

## **Data Entry**

Data is entered through the keyboard, in response to the program's request.

## Output Description

See example provided. Each automobile is processed and printed separately. Annual ownership costs are printed in detail, and totals are provided for the number of years specified.

#### TRIP PLANNING - BASIC VERSION

## Description

This program offers assistance in planning your vacations and other automobile travel. Daily budgets and total trip costs are computed for your use.

## Functions of the Program

The program accepts keyboard inputs concerning the trip and produces a table showing the projected itinerary and costs for each type of expense incurred. Totals for each day are provided in addition to total trip costs.

#### Instructions for Use

Run the program and answer the questions asked by the program.

## **Data Entry**

58

All data is entered in response to the program's requests.

## **Output Description**

See example provided. A table of costs is produced that details the itinerary and produces totals for all costs.

#### TRIP PLANNING - EXTENDED VERSION

## Description

This program offers assistance in comparing various travel plans and routes.

## Functions of the Program

The program accepts keyboard inputs of trip information and produces a table showing the itinerary and the projected costs for that trip/route. Totals for each day are produced, along with overall totals for the trip.

#### Instructions for Use

Run the program and answer the questions asked of you.

## **Data Entry**

All data is entered through the keyboard in response to the program's requests.

## **Output Description**

See example provided. The results for each route are printed with daily and trip totals provided.

#### **Comments**

The maximum number of routes is currently set at five, and the maximum number of days for each is set at fifteen. These are easily changed by modifying lines 40-140.

### **RECIPE CONVERSION**

# Description

This program converts given quantities of recipe ingredients based upon the number of servings in the basic recipe to the quantities needed for the number of servings desired.

# Functions of the Program

The program accepts recipe name, the number of servings in the basic recipe, the number of servings desired, and the individual ingredients of the recipe. The quantities are converted for the desired number of servings, and the modified recipe is printed.

### Instructions for Use

Run the program and answer the questions asked.

### **Data Entry**

All data is entered through the keyboard in response to program prompting.

# **Output Description**

See example provided.

### **MEAL PLANNING**

# Description

This program produces a menu and checklist for determining additional grocery items required. Grocery items are categorized for ease in shopping.

# Functions of the Program

The program initializes all data items for the food categories first. Following this initialization, the first day's results are analyzed and printed, followed by each succeeding day, for all of the days included as data items. The last item printed is a list for shopping use. Multiple passes through the data entries are made to insure correct categorization of items.

### Instructions for Use

Prior to running the program, the data items for each meal must be entered using DATA statements.

# **Data Entry**

All data is entered using DATA statements.

### **Data Formats**

There are three types of data entries:

- 1. A master record is required for each day entered:
  - \*, Day name
- 2. A meal record is required for each meal that gives the meal number of the day. The format is:

N, Meal number of the day

3. Menu item entries are entered for each item. The format is:

Food category code, Item description

# **Output Description**

See example provided. Output is in two sections:

- 1. A menu for each day included in the data items.
- 2. A grocery list of the items required for the menu.

(Note: This program was designed for printer's output; for screen's output, some format modifications are necessary.)

# Suggested Enhancements

You may wish to have the data entered via the keyboard rather than through DATA statements. To accomplish this, an array will be required to hold the data.

### **DIET PLANNING - VERSION 1**

# Description

This program produces a menu, complete with calorie values, calories per meal, and total calories per day. After printing the menu, it produces a list of all food items scheduled for each of several major food groups.

# Functions of the Program

The program initializes the food group categories first. Following this, menus are printed, calorie counts produced, and daily totals are printed. The last task of the program is the printing of the food group lists. It does so by rereading the data items for each major food group.

### Instructions for Use

Prior to running the program, the menu items must be entered using DATA statements.

# **Data Entry**

All data is entered using DATA statements.

### **Data Formats**

There are three types of data entries:

- 1. A master card is required for each day. Its format is:
  - \*, Day name
- 2. A meal number entry is required for each meal of the day:

N, Meal number of the day

3. Menu items are entered for each item. The format is:

Food category code, Item description, Calories

# **Output Description**

See example provided. Output is in two sections:

- 1. A menu for each day entered in the DATA statements is produced.
- 2. A list of foods, scheduled by major food groups, is printed.

(Note: This program was designed for printer's output; for screen's output, some format modifications are necessary.)

# Suggested Enhancements

You may wish to have the data entered through the keyboard rather than through DATA statements. To accomplish this, an array will be required to hold the items entered.

### **DIET PLANNING - VERSION 2**

# Description

This program for diet planning deals with fixed diet requirements and produces a menu selection list based upon the diet's requirements.

# Functions of the Program

This program differs substantially from the other version of diet planning provided in this book. The program reads the data items; determines whether the item is a member of a group or subgroup of foods and whether it is optional or required; and then prints the item accordingly. The processing of the various groups/subgroups is accomplished in separate routines for ease of understanding or for modification, if desired.

### Instructions for Use

Provide the data items for the diet prior to running the program for the first time.

# **Data Entry**

All data is entered using DATA statements.

### **Data Formats**

Several types of data formats are available for your use, as follows:

- 1. A master item is required for each meal. Its format is:
  - \*, Meal name
- 2. Group choices are provided by an entry of the following form:
  - G, Number of choices (choices must follow immediately)
- 3. Subgroup items are indicated by the following:
  - S, Number of optional choices (choices must follow immediately)
- 4. Required items are indicated by the following:

# R, Required item name

5. Choices for the optional entries are provided in Englishlike form, without any transaction code.

Note the END data item.

# **Output Description**

See example provided. A separate column for each day is printed for use in menu selection.

# Suggested Enhancements

You may wish to extend the program to accept the individual's menu choices and compare them against the selection criteria. Following a check for accuracy, the menu may be printed.

### **CATEGORIZING RECIPES — VERSION 1**

# Description

This simple program allows the cook to categorize favorite recipes and locate them instantly with the help of the computer.

# Functions of the Program

The program accepts the recipe code to search for and then locates all recipes categorized with that code. The recipe name is printed, along with its location and page number.

### Instructions for Use

Recipes must be entered prior to running the program.

# **Data Entry**

All data is entered using DATA statements.

### **Data Format**

The format of the DATA statement is:

Recipe code, Recipe name, Location, Page number

# **Output Description**

See example provided. All recipes with a code that matches the selection criteria will be printed, or all entries can be printed, if desired.

### **CATEGORIZING RECIPES - VERSION 2**

# Description

This recipe program is provided for those who wish to recall their favorite recipes with the push of a button. The recipes are entered as data to the program and then are printed upon request.

# Functions of the Program

The program allows both the printing of all recipe names available and the printing of individual recipes, complete with instructions and ingredients.

### Instructions for Use

All recipe items must be entered prior to running the program.

# **Data Entry**

All data is entered using DATA statements.

### **Data Formats**

Data is entered in two formats:

- 1. The master record for each recipe has the following form:
  - \*, Recipe code, Recipe name
- 2. Recipe instructions are entered in Englishlike form, without special coding.

Note the END record.

# **Output Description**

See example provided. Output can be either a condensed list for review purposes or a detailed printout of the selected recipe.

# Suggested Enhancements

This application is ideal for conversion to disk or tape data file storage.

### FREEZER INVENTORY - BASIC VERSION

# Description

This program allows you to maintain and control an inventory of all items in your freezer. Either a full list of the freezer's contents or a list of all items of a selected type can be printed when desired.

# Functions of the Program

The program initializes the entries based upon keyboard inputs and then prints the requested items.

### Instructions for Use

Freezer inventory items must be given an item number and entered as data to the program prior to running it. Items used should be recorded and deleted from the data list at the time of use to insure the continued accuracy of your inventory.

# **Data Entry**

Data is entered using DATA statements.

### **Data Format**

A single data format is used by the program. It is recommended that the data items be entered in item number order. The format is:

Item code, Description, Item number,

Month, Year item was placed in freezer, Months of freezer life Note the END record.

# **Output Description**

See example provided. Two forms of output are available:

- 1. A list of the current contents (all entries).
- 2. A list of all items of a specified type.

# **Suggested Enhancements**

88

The possibility of disk or tape-file storage and update of the inventory items should be considered for ease of use.

### FREEZER INVENTORY - EXTENDED VERSION

# Description

This program provides a perpetual inventory of your freezer's contents, complete with an analysis of the items scheduled to reach their maximum freezer life. Its use will help to insure the greatest possible savings from your freezer.

# Functions of the Program

The program initializes all data elements, including month name abbreviations prior to processing. Depending upon the answers that you provide to the questions asked by the program, a list will be provided in one of several formats. The expiration date list is sorted by expiration dates (computed from the date in and the months of freezer life for the item). The program's various processing elements have been separated to provide flexibility for extension of any of its features.

### Instructions for Use

Freezer inventory items must be entered as data items to the program. Items used should be recorded and deleted from the data list at the time of use to insure the continued accuracy of your inventory.

# Data Entry

All data items are entered as DATA statements.

### **Data Format**

A single data format is used:

Item code, Description, Item number,
Month, Year item was placed in freezer, Months of freezer life
Note the END data card.

# **Output Description**

See example provided. Three forms of reports are available:

- 1. A list of the freezer's entire contents.
- 2. A list of all items of a specific type.
- 3. A sorted list that is in order by expiration date or item types.

# **Suggested Enhancements**

The possibility of disk or tape-file storage should be considered for this program.

### SUPERMARKET LIST

# Description

This program assists the homemaker by producing a grocery shopping list that is listed by categories to facilitate fast and efficient shopping.

# **Functions of the Program**

The program begins by initializing the seven major food categories provided. Additional categories can be added easily, if desired. Prior to the printing of the grocery list, all data items are read and validated for accuracy. The major processing area of the program cycles through the data (once for each food category) and produces the formatted listing.

### Instructions for Use

Data statements must be provided to the program prior to running it.

# **Data Entry**

All data is entered using DATA statements.

### Data Format

The format of the grocery list items is:

Food category code, Item description, Quantity

Note the END data record.

# **Output Description**

See example provided.

```

# Scheduling Programs for Home Use

TV Scheduling
Reminder Calendar—Basic Version
Reminder Calendar—Extended Version
Job Jar
Chores
Lawn/Plant Care

#### TV SCHEDULING

# Description

This program eliminates difficulties arising from family television viewing conflicts. It produces a weekly schedule that details the time, channel, and person scheduled to view a particular television show.

# Functions of the Program

This program has several subroutines. Each is designed to perform a specific printing function. If extensions are desired, they should be relatively easy to accomplish by changing the individual routines. The program reads the scheduled items from DATA statements, determines their placement in the schedule, and then prints the schedule for the week.

#### Instructions for Use

Provide all individual schedule items prior to running the program. Priority in scheduling is given to the last entry read. Note the method used to indicate time: At 1200, the counter moves to 0030.

# **Data Entry**

All data is entered using DATA statements.

#### **Data Format**

All data is entered using a single format:

Person, Day of the week, Start time, Stop time, Channel number Note the END data record.

# **Output Description**

See example provided. Output is printed for seven days.

(Note: This program was designed for printer's output; for screen's output, some format modifications are necessary.)

#### REMINDER CALENDAR - BASIC VERSION

# Description

This program produces a simple reminder calendar for the busy individual or family. The items are printed in abbreviated form on the calendar, and a detailed list is printed upon request.

# Functions of the Program

The program prints, for the month selected, a calendar and list of the items scheduled. Most program functions are executed using subroutines to facilitate extensions or modifications to the basic listing. The major processing loop occurs in lines 210-420. All functions occurring after the termination point are performed using GOSUBs.

#### Instructions for Use

All scheduled items must be entered prior to running the program.

# **Data Entry**

All data items are entered using DATA statements.

#### **Data Formats**

There are two data formats used by the program:

- 1. The master month record is entered as the first item:

  Month name, Days in month, Day of week that month starts on
- 2. Schedule items are provided in the following format:

Month, Day, Abbreviated description, Description

# **Output Description**

See example provided. The program produces a calendar and a detailed print of the scheduled items.

(Note: This program was designed for printer's output; for screen's output, some format modifications are necessary.)

#### REMINDER CALENDAR — EXTENDED VERSION

# Description

This program is a useful assistant for the busy individual or family. It produces a reminder calendar for as many months in advance as are desired.

# Functions of the Program

This program functions in a similar way to the basic reminder program given previously. There are, however, several major enhancements:

- 1. This program produces the calendars for the number of months specified.
- 2. The calendars are printed either continuously or with page alignment
- 3. The calendars can be either condensed or expanded (to allow for "write-ins").
- 4. Month names and the number of days in each month are initialized for you.

### Instructions for Use

Record your schedule items and enter them prior to running the program for the month that they are scheduled in.

#### **Data Entry**

All data is entered using DATA statements.

#### **Data Format**

One data form is required. Scheduled items are entered in the following form:

Month, Day, Abbreviated description, Description

# **Output Description**

See example provided. The printed results will include individual prints for each of the months requested. Page alignment is allowed, if requested.

(Note: This program was designed for printer's output; for screen's output, some format modifications are necessary.)

#### **JOB JAR**

# Description

The traditional jar of household tasks that is used to occupy idle moments is automated by this program. Odd jobs that we never seem to find the time for are placed in the computer job jar for future reference. Later, when you have free time, the computer will randomly choose one to fill that idle moment. It's a sure way of taking care of annoying household duties. Peeking is not allowed.

# Functions of the Program

The program randomly selects an item from the data items supplied that meets the time availability specified.

#### Instructions for Use

New jobs that are to be added to the jar are entered by means of DATA statements. Completed jobs should be deleted from the data list at time of accomplishment.

#### **Data Entry**

All data is entered using DATA statements.

#### **Data Format**

112

Tasks are entered using the following format:

Job name/description, Estimated time to complete

# **Output Description**

See example provided.

#### **CHORES**

# Description

The computer becomes the perfect arbitrator of the question, "Whose turn is it to do the dishes?" This program produces a weekly schedule of all chores and individuals responsible for each.

# Functions of the Program

This program accepts a cycle number from the keyboard and schedules the next person to perform each chore, a schedule based upon an equal sharing by all individuals eligible for the task. Consecutive cycle numbers must be used to insure equitable scheduling. Tasks are entered as either the responsibility of one person or the responsibility of all. The schedule is produced, and a checklist is provided, for a week at a time.

#### Instructions for Use

Determine the tasks that are required, the days of the week that they are to be accomplished on, and the individuals eligible to be scheduled for that task.

# **Data Entry**

All data is entered by means of DATA statements except for the current cycle number.

#### **Data Formats**

Two formats are available:

1. Tasks are identified by the following format:

Task type, Task name,

Y or N (for each of the seven days of the week, Sunday first)

A Y (yes) entry for a day indicates that the task is to be performed on that day. For example: Y, N, N, Y, N, N, Y indicates that the task is to be performed on Sunday, Wednesday, and Saturday. Task types are either "\*" or "A." The "\*" indicates that the task is to be shared by the individuals following the item. The "A" indicates that the task is to be performed by all individuals. See example.

2. Following each task record, a list of the individuals is provided in the following form:

N, Name of the individual

# **Output Description**

See example provided. The results are printed for one week at a time. (Note: This program was designed for printer's output; for screen's output,

some format modifications are necessary.)

#### LAWN/PLANT CARE

# Description

This gardener's assistant identifies and prints the scheduled daily and monthly gardening tasks for the specified times requested.

# Functions of the Program

The program produces outputs of monthly calendars beginning with the specified month and continuing for the number of months requested. The major processing loop calls various subroutines to perform the formatted printing of the calendar. Note that the data is supplied in two sections. The first section identifies tasks that are scheduled for specific dates, and the second supplies tasks that are scheduled for the month only.

#### Instructions for Use

Enter scheduled items as data prior to running the program.

# **Data Entry**

Data is entered by means of DATA statements.

## **Data Formats**

- 1. Tasks that are scheduled for a specific date are entered as:

  Month, Date, Abbreviated description, Extended description
- 2. Tasks that are identified for the month only are entered as:

  Month, Task description

# **Output Description**

# See example provided.

(Note: This program was designed for printer's output; for screen's output, some format modifications are necessary.)

# List Programs for Every Purpose

Christmas Cards Addresses-Version 1 Addresses-Version 2 Addresses-Version 3 Record Lists Record Search Reference Filing Music Collections Coin Collections Coin Investments Beer Can Collection **Book Collections** Service Calls Recording Tapes Club Lists Table of Contents

#### **CHRISTMAS CARDS**

# Description

This program records addresses for Christmas cards and letters and identifies those that have been sent or received.

# Functions of the Program

The program reads names, addresses, and sent/received indicators and then prints a formatted listing for use in addressing and mailing your Christmas cards.

#### Instructions for Use

Enter your Christmas card list prior to running the program. Maintain the data entries for use in determining next year's mailing requirements, adding and deleting from the list as necessary.

### **Data Entry**

All data is entered by means of DATA statements.

#### **Data Format**

The data is formatted as follows:

Name, Street address, City, State, Zip, Sent, Received

# **Output Description**

See example provided.

#### **Comments**

You may not wish to use the sent/received portion of the program. This function can be eliminated easily from the program (check lines 140, 150, and 220-260).

#### ADDRESSES - VERSION 1

# Description

This program produces address listings without all of the frills for you. It is the simplest version of the three programs provided in this book.

# Functions of the Program

Addresses are read from DATA statements and are printed in a simple mailing label form.

#### Instructions for Use

Enter the addresses in the form shown prior to running the program.

# **Data Entry**

All data is entered by means of DATA statements.

#### Data Formats

The first record of the data contains the number of lines for spacing purposes. Its form is:

Number of lines

The remaining records are of the form:

Number of lines in address, Line 1, Line 2, etc. ...

# **Output Description**

See example provided. Output is in mailing label format.

(Note: This program was designed for printer's output; for screen's output, some format modifications are necessary.)

#### **Comments**

Instructions are contained in the program.

#### ADDRESSES - VERSION 2

# Description

This version of the addressing program allows the selected printing of the records in groups.

# Functions of the Program

The program prints the record numbers (inclusive) requested during the question/answer sequence. The records preceding the specified start point are ignored, and the program terminates after it has completed the printing of the last record requested.

#### Instructions for Use

Enter the addresses as data prior to running the program.

#### **Data Entry**

All data is entered as DATA statements.

#### **Data Formats**

The first data record is the number of lines for spacing purposes. Its form is:

Number of lines for each record print

The remaining records in the data are of the following form:

Number of lines in address, Line 1, Line 2, etc. ...

Note the 0 card to identify the end of the data.

# **Output Description**

See example provided.

#### **Comments**

Instructions are provided in the program.

#### ADDRESSES — VERSION 3

# Description

This version allows individualized print formats and provides test print patterns for verification and alignment.

# Functions of the Program

The program determines, through the question and answer sequence, the format of the printed output. Test prints are then provided for verification and alignment.

#### Instructions for Use

Address items are entered as data prior to running the program.

#### **Data Entry**

All data is entered as DATA statements.

#### **Data Format**

132

The single format used is:

Number of lines in address, Line 1, Line 2, etc. ...

#### **Output Description**

See example provided. Output format is uniquely specified by your selections, however.

## **RECORD LISTS**

## Description

This program maintains your record library. It identifies the records owned and their locations.

## Functions of the Program

The program reads the record information from DATA statements and produces a list in the order specified. Multiple passes through the data are used for the ordering process to minimize the use of files or arrays.

#### Instructions for Use

Enter the record information prior to running the program.

## **Data Entry**

All data is entered by means of DATA statements.

#### Data Format

136

The form of the data is:

Artist, Title of the record, Location

## **Output Description**

See examples provided. The order of the output is determined by the option selected.

#### RECORD SEARCH

## Description

This program maintains your record library and allows both the printing of its contents and searches for any specific artist or record title.

## Functions of the Program

The program reads the record information from DATA statements and prints all records in the order specified or locates all items that match a selection criteria that you supply.

#### **Instructions for Use**

The record information must be entered as DATA statements prior to running the program.

## **Data Entry**

All data is entered by means of DATA statements.

#### Data Format

The format of the record inventory information is:

Artist name, Title of record, Location

## **Output Description**

See example provided. Note the various printing options that are available.

```

#### REFERENCES FILING

## Description

This program offers the user the opportunity to record important references for school, hobby, or home use, and to retrieve selected references when required.

## Functions of the Program

The program accepts the reference entries from the data and prints either all entries or just those that match the user supplied selection criteria. Selection is based upon the reference code given to each item.

#### Instructions for Use

Categorize the references within appropriate reference codes, and then enter them as data prior to running the program.

## **Data Entry**

All data is entered by means of DATA statements.

#### Data Format

The format of the reference entries is:

Reference code, Item, Location, page number

## **Output Description**

See example provided.

#### MUSIC COLLECTIONS

## Description

This program offers the musically inclined an able assistant to locate and print the location of all their favorite pieces. Selected pieces can be searched for and printed, if desired.

## Functions of the Program

The program accepts the music entries from the data and prints either all items or just those that match the user-supplied selection criteria. The selection of items is based upon a search through the titles of the data entered.

#### Instructions for Use

Enter the items as DATA prior to running the program.

## Data Entry

All data is entered as DATA statements.

#### **Data Format**

146

The musical pieces are entered in the form:

Title, Location, Page number

## Output Description

See example provided. Printed output is either a formatted list of all items or a print of those items that match the title being searched for.

#### COIN COLLECTIONS

## Description

This program offers the numismatist an able assistant to keep track of his collection. The collection can be listed in its entirety, or selected dates, coin denominations, mints, or coin types can be printed upon request.

## Functions of the Program

The program accepts the coin information from the data and prints the items specified. The selection of items to be printed can be based upon most of the items included in the data.

#### Instructions for Use

Enter the individual collection items into the program prior to running it.

## **Data Entry**

All data is entered by means of DATA statements.

#### **Data Format**

The format for the data is:

Coin date, Denomination, Mint, Coin type, Number minted (in millions), Condition

## **Output Description**

See example provided. Output is either a formatted list of all items or a print of those that satisfy the selection criteria.

## **COIN INVESTMENTS**

## Description

This program offers additional information to the numismatist that considers the collection as an investment. The collection information maintained by this program differs slightly from the previous version.

## Functions of the Program

This program accepts the coin information from the data items and prints it as specified by your responses to the program's questions. The list can include all, or selected categories of, items and can, if desired, include total cost and current value information.

#### Instructions for Use

The individual item information must be entered prior to running the program.

## **Data Entry**

All data is entered by means of DATA statements.

#### **Data Format**

The format of the data is:

Coin date, Denomination, Mint, Type, Number minted (in millions), Purchase date, Quantity, Cost, Value

## **Output Description**

See example provided.

(Note: This program was designed for printer's output; for screen's output, some format modifications are necessary.)

#### **BEER CAN COLLECTION**

## Description

This program offers beer can collectors (young or old) the capability to control their collections and take advantage of opportunities for trades.

## **Functions of the Program**

The program accepts from the data the information concerning the individual cans in the collection and then prints the items specified. The items printed can include all or just a part of the collection, depending upon the selection criteria provided.

#### Instructions for Use

Enter the individual items of the collection as data prior to running the program. Items sold or traded should be deleted when the transaction occurs.

## **Data Entry**

All data is entered by means of DATA statements.

#### **Data Format**

The format for the collection data is:

Brand name, Size, Can type, Material, Color/Condition

## **Output Description**

See example provided. Output is either a formatted list of all items or a list of those that match the selection criteria specified.

#### **BOOK COLLECTIONS**

## Description

The computer really becomes a librarian with this program. Books in your private collection can be listed or searched, as you desire, thus allowing you to control your library.

## Functions of the Program

The program accepts the information about each book from the data and then prints the entries or selects those that match the criteria specified.

#### Instructions for Use

Prior to running the program, information about the books in the collection must be provided.

## **Data Entry**

All data is entered as DATA statements.

#### **Data Format**

162

The form of the data input is:

Title, Author, Location

## **Output Description**

See example provided. Output is a formatted list of all items or just those that satisfy the selection criteria specified.

#### SERVICE CALLS

## Description

Service information and repair points are recalled at the touch of a button with this program for recording service information on your major home appliances.

## Functions of the Program

This program provides little processing capability as it merely produces a formatted list of the service items included in the data. It does provide, however, a simple means of eliminating nagging household problems.

#### Instructions for Use

Enter information about the appliances and their service points prior to running the program.

## **Data Entry**

All data is entered by means of DATA statements.

#### **Data Format**

The form of the data is:

Appliance, Repair company, Address, Telephone number

## **Output Description**

See example provided.

#### Comments

This program is ideally suited for experimentation in adding functions or extensions to the possibilities provided. As a start, consider adding a selection function to print specified items.

#### RECORDING TAPES

## Description

There is no reason to search manually through tape reels and handwritten notes to find a particular recording when this program can do it for you in much less time.

## Functions of the Program

The program reads the tape information from the data supplied and prints an index of any or all tapes, or locates all items that meet the criteria specified.

## Instructions for Use

The tape information and recorded items must be entered prior to running the program for the first time.

## **Data Entry**

All data is entered by means of DATA statements.

#### **Data Formats**

1. A master record is required for each tape. The form is:

Tape number, Speed

2. Recorded items are entered using the form:

A, Artist name, Title, Location on the tape

## **Output Description**

See examples provided. The formatted output clearly identifies the contents of the tapes printed and the location of all items on the tape.

#### **CLUB LISTS**

# Description

For the individual involved in club activities, this program can save hours of manual typing and calculation efforts.

# Functions of the Program

The program reads club member information from the DATA statements and performs the requested processing, Processing requirements are determined by the option number entered. All options are separated in the program for clarity. The options available are:

- 1. Printing mailing labels
- 2. Computing and printing members' dues status
- 3. Printing a list of names and telephone numbers
- 4. Printing a member listing in checklist form

# Instructions for Use

Enter and store the member information, prior to the program's use.

## **Data Entry**

All data is entered by means of DATA statements.

#### **Data Formats**

- 1. The first data record contains spacing and dues information:

  Lines to print per address, Dues required for each period
- 2. Individual member information is entered in the form:

  Name, Telephone, Street, City-State-Zip code, Dues paid

# **Output Description**

See examples provided. Option choices determine the format of the output produced.

#### TABLE OF CONTENTS

# Description

This program can satisfy a number of school, hobby, and home needs. With a little thought, it can be applied to everything from creating outlines for school to recording the contents of your program cassettes.

# Functions of the Program

The program will either locate and print specific items from the data items or produce a formatted listing with user-controlled indentation.

#### Instructions for Use

Determine the level number (for indentation) for each of the items, and enter the information prior to running the program.

# **Data Entry**

All data is entered by means of DATA statements.

#### **Data Format**

The form for data entry is:

Item level, Item, Page number/Location

Note the 0 END card.

# **Output Description**

See example provided. Output is produced with indentation based upon five spaces multiplied by the level number supplied with the item.

# **UTILITY BILL ANALYSIS**

# Description

The rising cost and dwindling supply of energy indicates the need for careful control and analysis of energy usage. This program was designed to assist with these tasks.

# Functions of the Program

The program accepts periodic readings of any utility meter and computes daily use and cost information. Totals and averages for the period are produced after all data items have been processed and printed in a tabular form.

#### Instructions for Use

Determine the unit cost of the energy use from your statement. Read the meter and enter the information to the program, as frequently as possible. Daily readings are best for thorough interpretation of the results.

# **Data Entry**

All data is entered as DATA statements.

#### **Data Formats**

The first record provided is the cost per unit of the item. The second and succeeding records are of the form:

Date of reading, Meter reading

# **Output Description**

See example provided.

#### **HEALTH RECORDS**

# Description

Maintaining family health histories and immunization information is frequently a source of difficulty in many households. With this program to assist you, the task may be simplified.

# Functions of the Program

The program reads the various data items provided and prints either all items or only those for the specified individual. Note that the processing of the data for the two printing options has been totally separated for your ease of interpretation and modification, if desired.

#### Instructions for Use

Data items should be provided for illnesses and immunizations prior to running the program. New items should be added as they occur.

# **Data Entry**

All data is entered using DATA statements.

#### **Data Format**

182

The format for all data is:

Individual's name, Month-Day-Year, Type code, Description Type codes are specified during data initialization.

# **Output Description**

See examples provided. Two forms of output are available.

#### **BULLETIN BOARD**

# Description

A computer never forgets. This program allows the storage of notes and reminders for family members.

# Functions of the Program

The program searches the data items and identifies messages and the individual they they are directed to. It prints the messages when requested.

#### Instructions for Use

Messages must be recorded in DATA statements and deleted as their usefulness passes. Avoid the use of commas (,) in the message text.

## Data Entry

All data is entered by means of DATA statements.

#### **Data Format**

186

All messages are entered in the following form:

\*, Individual directed to, Message contents, Message initiator

# **Output Description**

See example provided. Message is free-form, without restrictions (except for potential formatting problems caused by commas).

```

#### **SCHOOL GRADE RECORDING**

# Description

This program maintains course grade information for the review of academic status between report cards and provides continual progress analysis.

# Functions of the Program

This program will print all information entered (in course sequence) or will print the grades associated with a specified course only. Courses and grading devices are initiated prior to reading the grade data items. Note the sample data provided.

#### Instructions for Use

Determine the number of courses to be monitored, and enter this number and the course names as the first data record. Following this, determine the number of grading devices (tests, homework, etc.) that will be recorded, and enter this information as the second data record. Grades for course activities can then be entered and reviewed as they occur.

# Data Entry

All data is entered by means of DATA statements.

#### **Data Formats**

The first two data records initialize the course and grading device information. Their form is:

Number of courses, Course code, Course name, ...
Number of devices, Device code, Device name, ...

For each of these forms the codes and names are repeated for the number of times specified. Course grade information can then be entered in the form:

Course code, Device code, Number score, Letter grade, Date

# **Output Description**

See example provided.

# Suggested Enhancements

If your school system is consistent in its grading policies, an ideal enhancement would be the computation of current averages during the semester.

#### **ACHIEVEMENT RECORDING**

# Description

This program monitors progress toward satisfying the requirements necessary to achieve a goal. An ideal application is recording progress toward the completion of Scouting requirements for progression to the next rank.

# Functions of the Program

The program determines the number of individuals (or groups) that will be recorded. Following this, the achievement requirements and the individual's status on each item is read, interpreted, and printed.

# Instructions for Use

Enter the number of individuals recorded, followed by their names. Achievements and requirements are then determined and entered, followed by a status indicator for each individual.

# **Data Entry**

All data is entered by means of DATA statements.

#### **Data Formats**

- 1. The first data item initializes the individual's names:
  - Number of individuals recorded, Individual's names, ....
- 2. Each achievement (goal) is then identified by the form:
  - \*, Achievement name
- 3. The requirements for attaining each goal and the status of progress toward that goal is entered in the following form:

Requirement, Status codes, .... (one for each individual)

# **Output Description**

See example provided.

# **Suggested Enhancements**

The status indicators are ideal candidates for storage on disk or tapestorage devices.

# **CALENDARS**

# Description

You'll never need to buy another calendar with this program that produces calendars for any month or year in a form that permits writing in comments.

# Functions of the Program

The program's functions are primarily directed toward the printing of a nicely formatted calendar. Each major printing function is separated into an independent module for clarity and your extension or modification.

#### Instructions for Use

Run the program.

# **Data Entry**

Not applicable. The starting month and year, and the number of months to be printed, are entered in response to program requests.

# Data Format

194

Not applicable.

# **Output Description**

See example provided. The number of months printed is determined during the program's execution.

(Note: This program was designed for printer's output; for screen's output, some format modifications are necessary.)

#### **MULTIPLE PRINTS**

# Description

This program will assist in the solution of the problem associated with producing multiple copies of a single item.

# Functions of the Program

The program accepts text from DATA items and prints the number of copies, and in the form, specified.

#### Instructions for Use

Format your information, and enter it as data prior to running the program.

# **Data Entry**

All data is entered by means of DATA statements.

#### **Data Format**

198

The format for data entry is free-form. Note that commas will affect formatting.

# Output Description

See example provided. The form, spacing, and number of copies is determined by your response to the program's questions.

# PAPER ROUTE - BASIC VERSION

# Description

Paper route delivery schedule records and collection lists can be a tedious and time-consuming task for the young entrepreneur. This program can provide much needed assistance in these tasks.

# Functions of the Program

The program accepts customer and price information from DATA statements and produces either a collection list or a route delivery list. Following the completion of the delivery list, customer and paper counts are produced to assist in ordering for the week.

#### Instructions for Use

The price of the various delivery options must be supplied along with a customer list, complete with their delivery requirements, prior to running the program.

# **Data Entry**

All data is entered by means of DATA statements.

#### **Data Formats**

The following data formats are required:

1. The first data record provides the price of delivery information for collection list use:

Sun cost, Mon cost, ..., Sat cost, Weekly cost, Monthly cost

2. Customer delivery items are entered using the following form:

Name, House number, Street name, Delivery schedule

The delivery schedule is coded as follows:

- 1. M is entered for monthly deliveries.
- 2. W is entered for full weekly deliveries.
- 3. D is entered to indicate that the customer receives papers only on selected days. It is followed (separated by a comma) by the days that the customer receives delivery (1-Sun, 2-Mon, ... 7-Sat). See example data provided.

# **Output Description**

See example provided. Two forms of output can be selected:

- 1. A list for collection purposes.
- 2. A daily delivery list for the route.

# PAPER ROUTE - EXTENDED VERSION

# Description

This program extends the basic version by allowing the carry over of noncollected items from the previous collection period and assists the user by projecting his expenses for the period.

# Functions of the Program

The functions of this program are identical to the basic version except that computations have been added to carry over money owed from the previous period. An additional function has been added to accept additional charges/credit items and compute a projected bill for the papers and services received.

#### Instructions for Use

See the basic version. Additional information must be supplied for the amounts owed from previous periods.

# **Data Entry**

Data is entered using DATA statements. Additional charges and credits are entered at the keyboard.

#### **Data Formats**

Data formats are identical to the basic version except that the customer record is of the form:

Name, House number, Street name, Delivery schedule, Amount owed from the previous period

# **Output Description**

See example provided. The third option prints paper counts and the costs of delivery.

(Note: This program was designed for printer's output; for screen's output, some format modifications are necessary.)

#### **WEIGHT CONTROL**

#### Description

Keeping records of weight for reviewing progress and analyzing diets is practiced consistently by weight clinics and health clubs. This program provides the capability to accomplish this effectively in your own home with your microcomputer.

#### Functions of the Program

The program determines the starting date for analysis and computes results achieved from that day forward. All data items read prior to the starting date are ignored by the program. The printed results provide daily weight information and a summarization of total results after completion of all processing.

#### Instructions for Use

Weight information should be recorded daily and entered as data prior to running the program.

#### **Data Entry**

All data is entered as DATA statements.

#### **Data Format**

210

The data format of the records is:

Month, Day, Weight

#### **Output Description**

#### HOUSEHOLD INVENTORY

#### Description

For a wide variety of uses, including insurance requirements, it is advantageous to have a detailed record of all household property that includes purchase dates and costs. This program provides this information in a convenient form that can offer many supplemental benefits to the home.

#### Functions of the Program

The program accepts data from DATA statements and prints them in the order requested. The code for each printing option is kept separate to allow clarity and ease of extension.

#### Instructions for Use

Record information concerning your household items, and enter them as data prior to running the program.

#### **Data Entry**

All data is entered using DATA statements.

#### **Data Format**

The format of the entries is:

Item name, Location, Purchase date, Cost, Mfr, Serial Number

#### **Output Description**

See example provided. Output is presented in two forms as illustrated by the examples. All items can be printed in their original order or sorted by location.

# **Tutorial Programs for Home Use**

Math Practice—Addition
Math Practice—Subtraction
Math Practice—Multiplication
Math Practice—Division
Temperature Conversion Tutor

#### MATH PRACTICE - ADDITION

#### Description

This program provides the ideal device for introducing your children to the computer and building up their arithmetic abilities in addition. The level of difficulty of the problems is redefined during each run to meet changing skill levels.

#### Functions of the Program

This program produces a series of addition problems with randomly generated values. The complexity of the problems is determined by your choice of the number of digits in them. The individual running the program is given the problems and computes answers independently of the machine. The answers are then asked for by the computer and are compared to the correct answers. The results of the comparisons are printed immediately. At the end of the exercise, the number correct, the number wrong, and the percent score are printed. The program prints five problems per line. The results are printed after each group of five problems, and a summary is produced at the end.

#### Instructions for Use

Run the program and respond to the questions.

#### **Data Entry**

All data is entered through the keyboard.

#### **Output Description**

#### MATH PRACTICE - MULTIPLICATION

#### Description

This program provides the ideal device for introducing your children to the computer and building up their arithmetic abilities in multiplication. The level of difficulty of the problems is redefined during each run to meet changing skill levels.

#### Functions of the Program

This program produces a series of multiplication problems with randomly generated values. The complexity of the problems is determined by your choice of the number of digits in them. The individual running the program is given the problems and computes answers independently of the machine. The answers are then asked for by the computer and are compared to the correct answers. The results of the comparisons are printed immediately. At the end of the exercise, the number correct, the number wrong, and the percent score are printed. The program prints five problems per line. The results are printed after each group of five problems, and a summary is produced at the end.

#### Instructions for Use

Run the program and respond to the questions.

#### **Data Entry**

All data is entered through the keyboard.

#### **Output Description**

```

#### **MATH PRACTICE - DIVISION**

#### Description

This program provides the ideal device for building a child's arithmetic capability in division. The level of problem difficulty is easily modified to meet changing skill levels (without program modification).

#### Functions of the Program

This program produces a series of division problems with randomly selected values. The complexity of the problems is determined by the choice of the number of digits in the problems and the number of decimal digits for rounding accuracy in the answer. The individual running the program computes answers independently of the machine and enters the answers when they are requested. These answers are compared to the correct answers, and the results of the comparison are printed immediately. At the end of the exercise, the number correct, the number wrong, and the percent correct are printed. The randomly selected problems are printed five per line. The answers are requested, compared, and the results printed after each line of five problems is complete.

#### Instructions for Use

Run the program and respond to the questions asked by the program.

#### **Output Description**

See example provided.

#### Comments

Because of number storage differences between machines, the answer analysis routine (lines 570-740) should be verified.

#### **TEMPERATURE CONVERSION TUTOR**

#### Description

This program produces a series of temperature conversion problems with randomly selected values. The type of conversion (Fahrenheit to Celsius, or the reverse) is determined by your response to the program question.

#### Functions of the Program

The individual running the program computes answers independently of the computer and provides the answers to the machine when requested. These answers are compared to the correct answers, and the results of the comparisons are printed immediately. The program randomly selects the values of the items and prints them five per line. At the end of the exercise, the number correct, the number wrong, and the percent correct are printed. After the completion of all problems, a summary of the results is printed.

#### Instructions for Use

Run the program and answer the questions asked.

#### **Data Entry**

All data is entered through the keyboard.

# **Conversion Programs**

Metric Conversions Temperature Conversions Currency Conversions

#### METRIC CONVERSIONS

#### Description

This program produces conversions between standard measurements and metric units.

#### Functions of the Program

The program allows conversions of length, area, mass (weight), or liquid volume. The conversion can be either to or from the metric units.

#### Instructions for Use

Run the program and answer the questions asked.

#### **Output Description**

See example provided.

#### **Comments**

If additional conversion accuracy is required, modify the DATA statements in lines 1110-1320 to include the more accurate multiplier.

#### **TEMPERATURE CONVERSIONS**

#### Description

This program provides an easy and fast capability to convert between the Celsius and Fahrenheit temperature systems.

#### Functions of the Program

The direction of the conversion is specified followed by the temperature that is to be converted. The converted temperature (in the other scale) is then printed.

#### Instructions for Use

Run the program and answer the questions asked.

#### **Output Description**

#### **CURRENCY CONVERSIONS**

#### Description

This program converts from dollars to any other of the world's currencies.

#### Functions of the Program

The exchange rate and currency name is entered along with the starting and ending range of dollars to be converted. The computations are then performed, and the results are printed for the range specified.

#### Instructions for Use

Run the program and answer the questions asked.

#### **Output Description**

# **Recreational Programs**

Dice Roller Wordgame Bingo Dart Scoring Tarot Card Dealer Jogger Record

#### **DICE ROLLER**

# Description

This program rolls dice and prints the results in dice image format.

# Functions of the Program

The program randomly selects the values for the number of dice to be rolled and then prints images of the dice showing their results. Dice images are separate subroutines.

#### Instructions for Use

Run the program.

# **Output Description**

See examples provided. Dice images are produced for the number of dice requested.

# 

#### WORDGAME

# Description

The popular word search puzzle is automated by this useful home recreational program. You choose the level of complexity and the words to search for. The words that you enter during the program's execution will be randomly placed in the puzzle for you to find and circle. Don't be surprised if you find them (if you find them!) written in any direction, including backwards. No two puzzles are the same so family members will never tire of this educational and entertaining recreational program.

# Functions of the Program

The program determines the size and complexity of the puzzle by your answers to the program's initial questions. It produces a puzzle with random selection of word location and direction. The filling in of blank spaces is also accomplished by the random selection of letters.

#### Instructions for Use

Run the program and answer the questions asked.

# **Data Entry**

Words to be placed in the puzzle are entered through the keyboard.

# **Output Description**

See example provided. Puzzle size is limited only by the available memory and size of the printing device.

#### **BINGO**

# **Description**

You'll never be without a BINGO game once you've entered this program.

# Functions of the Program

BINGO cards are printed for the number of players requested, with randomly selected number placement for recording the numbers called. The program then proceeds to select random numbers to be called and prints these numbers each time the return for the next call is pressed until a "BINGO" is achieved.

#### Instructions for Use

Run the program, and continue to press the return for the next call until someone BINGOs. Enter the word "BINGO" to terminate the program.

# **Output Description**

See example provided. The number of cards printed is determined by your input to the question. For checking purposes, a list of all numbers called is produced after the BINGO is achieved.

(Note: This program was designed for printer's output; for screen's output, some format modifications are necessary.)

#### **DART SCORING**

# Description

This program acts as scorekeeper for a darts match between individuals or teams.

# Functions of the Program

The program allows for variable starting points and player numbers. Total scores are printed and the scores of each player are requested and subtracted from the totals prior to printing.

#### Instructions for Use

Run the program, and respond to the program's messages.

# **Data Entry**

All data is entered through the keyboard.

# **Output Description**

See the example provided.

#### **TAROT CARD DEALER**

# Description

This program shuffles and deals—for the user—the requested number of cards from a Tarot deck.

# Functions of the Program

The program initializes data through line number 700. The cards are then shuffled until the user "feels" that they are right. The program then prints the number of cards requested.

#### Instructions for Use

Run the program and respond to the program's messages.

# **Data Entry**

All data is entered through the keyboard.

# **Output Description**

See example provided. Cards are printed one at a time or continuously, with the "REVERSED" indicator shown when appropriate.

DIM .. SINGLE DIMENSION ARRAY

#### JOGGER RECORD

# Description

The jogger or jogging family will find this a useful addition to the program library. The program produces a graphic display of their jogging activities.

# Functions of the Program

The program reads the data items and produces a graphic output representing the distance traveled and either speed or time indicators. The program prints daily results and consequently considers days not recorded in the output.

#### Instructions for Use

Enter your jogging activity at the time it occurs as DATA statements to the program.

# **Data Entry**

All data is entered by means of DATA statements.

#### **Data Format**

The format of the data is:

Month-Day-Year (numeric), Miles, Whole hours run,
Additional minutes run

Note the 0 indicator for the end of data.

# **Output Description**

See examples provided. Separate outputs are produced based upon the speed or time option selected. The asterisks, \*\*\* (as shown), are used to indicate performance and are scaled to indicate time run or miles/hour. To change the scaling factor, change the values of variables S1 and S2 in the program.

(Note: This program was designed for printer's output; for screen's output, some format modifications are necessary.)

# Hobbyist's Diaries

Golf
Fishing
Photography
Greenhouse
CB Radio
Bowling
General Purpose Diary

#### **GOLF**

# Description

This program produces a diary for the golf enthusiast. It can interpret and print all items that the user wants to record for later analysis.

# Functions of the Program

The program provides a formatted print of all, or selected, items from the data records. Supplemental items can be defined by indicating the number of items and their names in the first data record. Supplemental items can then be read and printed in the same way as the standard items.

#### Instructions for Use

Prior to running the program, define the supplemental data items that you want to record. Enter the diary items as they occur.

# **Data Entry**

All data is entered using DATA statements.

#### **Data Formats**

See the sample data. The first record defines supplemental items and their titles:

Number of items, Title 1, Title 2, etc.

Diary entries are then recorded in the following form:

Date, Course name, Score, Supplemental value 1, value 2, etc.

# Output Description

266

See example provided. Print options allow all or selected items to be printed.

#### **FISHING**

# Description

This program produces a diary for the fisherman. It can interpret and print all items that the user wants to record for later analysis.

# Functions of the Program

The program provides a formatted output of all, or selected, items from the data records. Supplemental items can be defined by indicating the number of items and their names in the first data record. Supplemental items can then be read and printed in the same way as the standard items.

#### **Instructions for Use**

Prior to running the program, define the supplemental data items that you want to record. Enter the diary items as they occur.

# **Data Entry**

All data is entered by means of DATA statements.

#### **Data Formats**

See the sample data. The first record defines supplemental items and their titles. Its form is:

Number of items, Title 1, Title 2, etc.

Diary items are then recorded in the following form:

Month, Day, Species, Weight, Length, Lure, Place, Supplemental value 1, value 2, etc.

# **Output Description**

270

See example provided. Print options allow all or selected items to be printed.

# **PHOTOGRAPHY**

# Description

This program produces a diary for the photographer. It can interpret and print all items that the user wants to record for later analysis.

# Functions of the Program

The program provides a formatted output of all, or selected, items from the data records. Supplemental items can be defined by indicating the number of items and their names in the first data record. Supplemental items can then be read and printed in the same way as the standard items.

#### Instructions for Use

Prior to running the program, define the supplemental data items that you want to record. Enter the diary items as they occur.

# **Data Entry**

All data is entered by means of DATA statements.

#### **Data Formats**

See the sample data. The first record defines supplemental items and their titles. Its form is:

Number of items, Title 1, Title 2, etc.

Diary items are then recorded in the following form:

Picture number, Subject, Date, Supplemental value 1, value 2, etc.

# Output Description

See example provided. Print options allow all, or selected, items to be printed.

#### **GREENHOUSE**

#### Description

This program produces a diary for the horticulturist's greenhouse. It can interpret and print all items that the user wants to record for later analysis.

## Functions of the Program

The program provides a formatted output of all, or selected, data records. Supplemental items can be defined by indicating the number of items, and their names, in the first data record. Supplemental items can then be read and printed in the same way as standard items.

#### Instructions for Use

Prior to running the program, define the supplemental items that you want to record. Enter the diary items as they occur.

# **Data Entry**

All data is entered by means of DATA statements.

#### **Data Formats**

See the sample data. The first record defines supplemental items and their titles. Its form is:

Number of items, Title 1, Title 2, etc.

Diary items are then recorded in the following form:

Plant name, Container number, Date, Supplemental value 1, etc.

# Output Description

See example provided. Print options allow all, or selected, records to be printed.

#### **CB RADIO**

# Description

This program produces a diary (log) for the CB operator. It can interpret and print all items that the user wants to record in the log.

#### Functions of the Program

The program provides a formatted output of all, or selected, data records. Supplemental items can be defined by indicating the number of items, and their names, in the first data record. Supplemental items can then be read and printed in the same way as standard items.

#### Instructions for Use

Prior to running the program, define the supplemental items that you want to record. Enter the diary items as they occur.

### Data Entry

All data is entered by means of DATA statements.

#### **Data Formats**

See example data. The first record defines supplemental items and their titles. Its form is:

Number of items, Title 1, Title 2, etc.

Diary (log) items are then entered in the following form:

Handle, Call letters, Channel monitored, Supplemental value 1, etc.

# **Output Description**

282

See example output. Print options allow all, or selected, records to be printed.

#### **GENERAL PURPOSE DIARY**

#### Description

This program provides a general purpose diary that can be used for recording many different activities. It can interpret and print all items that the user wants to record.

# Functions of the Program

The program provides a formatted output of all, or selected, data records. All items contained in the data records are defined by indicating the number of items and their names in the first data record. These items can then be read and printed as if they had originally been programmed for.

#### Instructions for Use

Determine the items to be recorded in the records. Enter the diary items as they occur.

#### **Data Entry**

All DATA is entered by means of DATA statements.

#### **Data Formats**

See the sample data. The first record defines the number of items and their titles. Its form is:

Number of items, Title 1, Title 2, etc.

Diary items are then entered using the following form:

Value 1, Value 2, etc.

# **Output Description**

See example provided. Print options allow all, or selected, records to be printed.

# Computer Programs for the Home Charles D. Sternberg

Here's a comprehensive book of practical home application programs that will be helpful to the novice or experienced owner in increasing the usefulness of the Texas Instruments TI-99/4A home computer. Each program is documented with a description of its functions and operation, a listing in TI BASIC, a symbol table, sample data, and one or more output samples. Programs included are: Home Financial Programs; Automobile Related Programs; Kitchen Helpmates; Scheduling Programs for Home Use; List Programs for Every Purpose; Miscellaneous Programs for the Home; Tutorial Programs for Home Use; Conversion Programs; Recreational Programs; and Hobbyist's Diaries.

# INTRODUCTION TO TI BASIC

Don Inman, Ramon Zamora, and Bob Albrecht

Here's a comprehensive work, written by three of the foremost microcomputer programming experts in the country, that will teach you all about BASIC for use with the Texas Instruments home computer. Even if you've never worked with a computer, you can now teach yourself how to use, program, and enjoy the TI home computer with this entertaining and easy-to-read work. The authors have carefully constructed it so that you will soon be writing BASIC programs and exploiting all of the excellent features of the TI machines. Its 14 chapters and Appendices cover all of the essential programming statements and machine features. #5185-9, paper, 320 pages
